Release Note for VigorPro Alert Notice

Version: 1.2.0
Built Date: May 5, 2010
Applied Operation System: Windows XP/Vista/7

The VigorPro Alert Notice is an UDP (Syslog) based utility that supervises the receiving and parsing of packets, interprets format for the message in the packets, and shows the alert notice on a popup window. It makes the security information easy for users. It could support the Alert Types, AI Attack, AV Attack and Block.

New Features

- Add authentication feature to cooperate with VigorPro series router's new **User Management** function.

Improvement

- None

Known Issue

VigorPro Alert Notice Utility might be limited by some special firewall settings on Vista. The customers should be reminded about enabling this utility in firewall exception items.
