

# Release Note for SmartVPN Client

|                          |                                                                                                      |
|--------------------------|------------------------------------------------------------------------------------------------------|
| Firmware Version:        | 1.9.3                                                                                                |
| Release Type:            | Regular – Upgrade recommended when convenient, as it includes general improvements and optimizations |
| Applied Operation System | macOS 12.0                                                                                           |

The Smart VPN Client is a VPN configuration utility. It supports advanced VPN protocols, including IKEv2 EAP, IPsec Xauth, and DrayTek SSL VPN.

## New Features

- None.

## Improvement

- Corrected: An issue with missing translation for WireGuard profile.
- Corrected: An issue which caused the SmartVPN client system to crash unexpectedly.
- Corrected: An issue where the icon was displayed incorrectly when the WireGuard VPN was enabled.
- Corrected: Corrected: An issue where the VPN could only connect successfully after the VPN profile was deleted and the SmartVPN client was restarted.

## Known Issue

- None.

## Note

- None.
