

# Release Note for Syslog Utility

Firmware Version:	4.5.8
Release Type:	Normal
Applied Operation System:	Windows XP/Vista/7/10

## New Features

- Support to display and filter the VigorSwitch Syslog by Severity, Facility, and Category.
- Support to display and filter the VigorAP Syslog by Severity and Facility.

## Improvement

- Improved: Remove the web page of "Misc >> Recovery", since there is no use for this page.
- Corrected: An error occurred for the display of " Always on Top" on Syslog window menu.
- Corrected: An error occurred for the display of "Misc >> Network Information >> Lease Expires" field.
- Corrected: The Syslog kept showing "Failed to connect to router!" message after setting the telnet read out command.
- Corrected: The Syslog would crash when a PC had more than 5 NICs.

## Known Issue

- None.
