

Release Note for Vigor2867 Series

Firmware Version:	5.4.3
Release Type:	Regular – Upgrade recommended when convenient, as it includes general improvements and optimizations
Applied Models:	Vigor2867, Vigor2867be

The Vigor2867 Series is a multi-WAN security firewall router that integrates a DSL modem. It is compatible with various DSL protocols, including VDSL2 profile 35b Super Vectoring and ADSL2+, making it suitable for customers seeking high-speed performance.

New Features

- Add Cloudflare as a Dynamic DNS service provider.
- Increase the maximum number of sessions to 100K.
- Support DHCP Option 61 on WAN interfaces.
- Support Country Code configuration in VPN, General Setup, and Access Control.

Improvement

- Improved: IP Reputation Filters now use threat levels instead of IP reputation scores to block IPs displayed in URL/IP Lookup.
- Corrected: An issue where DNS over LAN-to-LAN VPN failed to work.
- Corrected: An issue where the email alert for WAN reconnection did not work.
- Corrected: An issue where the PPPoE connection failed to reconnect automatically.
- Corrected: An issue where the automatic upgrade schedule for the GeoIP database did not work.
- Corrected: An issue where the LAN DNS service did not work when no WAN connection was available.
- Corrected: An issue where WAN information for WAN interfaces other than WAN1 was not sent to Syslog.
- Corrected: An issue where ACME Auto Renew failed for DrayDDNS due to a disabled Custom DDNS profile with a null domain value.

Known Issue

- None.

File and Modem Code

- "Vigor2867_v5.4.3_STD.zip" provides modem code 5.16.19.0.

Note

- None.
