Release Note for VigorAP 710

Firmware Version:	1.2.2
Release Type:	Normal
Applied Models:	VigorAP 710

With this high cost-efficiency VigorAP 710, computers and wireless devices which are compatible with 802.11n can connect to existing wired Ethernet network via this VigorAP710, at higher speed. Easy install procedures allows any computer users to setup a network environment in very short time - within minutes, even inexperienced users.

New Features

- Add parameters related to wireless transmission / receiving traffic.
- Add TR-069 parameters for functions of Wireless LAN (2.4GHz)>>WMM Configuration and Bandwidth Management, Applications>> Temperature Sensor Graph, Applications>>Schedule, LAN>>Port Control, Applications >> Apple iOS Keep Alive, and AP Applications >> Auto Switch On/Off Wi-Fi.

Improvement

- Improved: Add TR-069 parameters for some settings (e.g., Telnet Server) in System Maintenance>>Management and System Maintenance >>Time and Date.
- Corrected: DHCP server renewed IP address for LAN device after reboot.
- Corrected: VigorAP did not respond to VigorACS after **Configuration >>Wireless LAN > >2.4G >> Security** configured via VigorACS.

Known Issue

- None
