

Release Note for VigorAP 900

Firmware Version: 1.1.4
Release Date: June 06, 2014
Applied Models:
VigorAP 900

VigorAP 900, the concurrent dual band wireless (2.4G/5G) access point, offers high-speed data transmission. With this high cost-efficiency VigorAP 900, computers and wireless devices which are compatible with 802.11n/802.11a can connect to existing wired Ethernet network via this VigorAP 900, at the speed of 300Mbps. Easy install procedure allows users to setup a network environment in very short time - within minutes, even inexperienced users. Also, VigorAP900 is a Power over Ethernet Powered Device which adopts the technology of PoE for offering power supply and transmitting data through the Ethernet cable.

New Features

- None.

Improvement

- Improved: Modify the temperature sensor chart on web user interface.
- Improved: Modify the AP management web page.
- Corrected: If there is data input in Device ACL list, the blank ACL profile cannot overwrite it.
- Corrected: The function of Syslog cannot be enabled on **System Maintenance>>Syslog** in some case.
- Corrected: The associated MAC address for wireless network is not displayed on Syslog.
- Corrected: Central AP Management doesn't work normally if the port number set for VigorAP is not "80".
- Corrected: The URL doesn't show the change of port number for HTTP page or in rebooting page if port number for HTTP and system reboot has been changed.
- Corrected: If Station Limit function is disabled for Vigor2860, the connection to VigorAP900 will be terminated.
- Corrected: Incorrect 5G channel is supported in Brazil.

Known Issue

- None
