Release Note for VigorAP 906

Firmware Version:	1.4.11
Release Type:	Normal - Upgrade recommended when convenient
Applied Models:	VigorAP 906

VigorAP 906, an 11ax AP, can be used to bridge any Ethernet device to a wireless network. With the mesh network, VigorAP 906 supports operation modes of the access point, mesh root, and mesh node. In addition, users can check the AP status from VigorAP APP (iOS and Android) easily.

New Features

- None.

Improvement

- Improved: Improve Web Security.
- Improved: Password mechanism changed to force admin to change the password from the default password.
- Corrected: An issue with failure to display the client statistics via VigorACS.
- Corrected: An issue with WIFI Up/Down failure to work when the device was powered on during the schedule time.
- Corrected: An issue with information for the used channel not shown on Central Management>>AP>>Status.
- Corrected: An issue with missing settings related to Hardware Acceleration while importing the configuration of the device.
- Corrected: An issue that the information and status for an AP could be read by a CPE even if AP's password had been changed.

Known Issue

- None.

Notes

- Remove the speed test function.
- The mesh network can be set between VigorAP906s, or setup between VigorAP906 & Vigor2865ax / Vigor2866ax / Vigor2927ax.
