# Release Note for VigorAP 920R Series

| | |
|---|---|
| Firmware Version: | 1.3.0 |
| Release Type: | Normal |
| Applied Models: | VigorAP 920R, VigorAP 920RP, VigorAP 920RPD |

VigorAP 920R outdoor access point is designed to meet the requirement of wireless network connection in rugged and hazardous locations. It is suitable for harsh physical environments including wind, rain and snow; and simultaneously it offers various functions to establish seamless, reliable, secure Wi-Fi network with high performance.

## New Features

- New WebUI design.
- Support Mesh.
- Support DrayTek Wireless APP.
- Support IGMP Snooping.
- Accept the access control list transferred by VigorACS 2.

## Improvement

- Improved: Update OpenSSL to 1.0.2o.
- Improved: Modify default Security modes of all SSIDs to WPA2/PSK.
- Improved: Show web warning about WPA2 key complexity when Fast Roaming is enabled.
- Improved: Add "Allow management from WLAN" option and Access List.
- Improved: DHCP clients of the AP can access AP web by http://vigorap.com.
- Improved: Add new Syslog categories for AP (Syslog Tools 4.5.7).
- Improved: Add Password check on web System Maintenance >> Configuration Backup.
- Corrected: On RADIUS Setting>>RADIUS Server Configuration, when configuring strings for a group of username and password with total characters more than 20, it would be shown incorrectly after pressing OK.
- Corrected: Unable to create a Root CA certificate if CN composed with two strings separated by white space.

## Known Issue

- None.
