Release Note for VigorSwitch P2261

Firmware Version:	3.35
Release Type:	Normal
Release Date:	January 24, 2017
Applied Models:	VigorSwitch P2261

The PoE 24+2-port Giga Port L2 Managed Switch, is a standard switch that meets all IEEE 802.3/u/x/z Gigabit, Fast Ethernet specifications. The switch included 24-Port 10/100/1000Mbps TP (20-Port for TP; 4-Port for Combo) and 2-Port Dual-SFP Fiber management Ethernet switch.

New Features

- LLDP is enabled in default.
- Add PoE report to show PoE Power Consumption.

Improvement

- Improved: Index ID link will be disabled when the user privilege level of a user logging into the Master switch is lower than Single IP group.
- Improved: Settings configured in Access Control List can be saved onto configuration file.
- Improved: In considering of security, username/password will not be included in exported/imported configuration file.
- Corrected: The function of sFlow was abnormal after running for a while. The switch stopped to transmit sFlow sample to the receiver and the CPU load of the switch would be up to 100%.
- Corrected: Spelling error for the description of Single IP Information Help.

Known Issue

- None
